OVERVIEW OF SITE LAYOUT IN REDDOT CMS

Currently, the College and departments share the same template. In many instances, the layout is predetermined or designed by the Experience Design Group (EDG), the university Web team. As a result, site editors do not have control over the template design. However, you have full control over web content. As illustrated in Figure 1, the layout format is one column, referred to as one-column page layout. Likewise, Figure 2 shows the two-column page layout. In the two-column page layout, you may notice that there is a right rail where you can include an image, related links, or other modules. By default, your template is set to a two-column page. Of course, you can easily switch between the two formats. This topic will be covered later in the guide.
